HTML

What is HTML?

- **HTML stands for Hyper Text Markup Language**
- **HTML is the standard markup language for creating Web pages**
- **HTML describes the structure of a Web page**
- **HTML consists of a series of elements**
- **HTML elements tell the browser how to display the content**
- **HTML elements label pieces of content such as "this is a heading", "this is a paragraph", "this is a link", etc.**

HTML List

HTML lists allow web developers to group a set of related items in lists. `<ul>` and `<ol>` tags are used to create unordered and ordered lists, respectively.

An unordered HTML list:

- Item
- Item
- Item
- Item

An ordered HTML list:

1. First item
2. Second item
3. Third item
4. Fourth item

Ordered List's Type Attribute

<u>Type</u>	<u>Description</u>
type="1"	The list items will be numbered with numbers (default)
type="A"	The list items will be numbered with uppercase letters
type="a"	The list items will be numbered with lowercase letters
type="I"	The list items will be numbered with uppercase roman numbers
type="i"	The list items will be numbered with lowercase roman numbers

HTML Table

HTML tables allow web developers to arrange data into rows and columns. `<table>` tag is used to create a table.

Name	Dept

HTML Table tags

<u>Tags</u>	<u>Description</u>
<table>	Use to declare a table
<tr>	Use to declare a table row
<th>	Use to declare a table header
<td>	Use to declare a table cell

HTML Table Attributes

<u>Attribute</u>	<u>Description</u>
border	Adds a border around the table
id	Gives the table an unique identifier
class	Assigns one or more css classes
style	Adds inline css
width	Sets table width

HTML Form

An HTML form is used to collect user input. The user input is most often sent to a server for processing.

First name:

Last name:

HTML Form tags
